About Us

caps was found in 1993, around the time when computers and computing were beginning to capture the imagination of business and industry.

Computers began to proliferate steadily and more computers meant more users and perceivably greater efficiency levels. But efficiency could be achieved only when computers were 'networked'. Networking enabled resources to be optimally shared.

It was **Caps'** mission, when we incorporated, to lead the way forward in the field of 'networking'.

And so we put together a team of likeminded professionals, all with a singular objective –

“ to devise, design and implement ‘simplified’ networking solutions for organizations.”

We began by offering services in hardware technology and products to businesses and individuals, through our channel Partners.

By **1995**, we were beginning to extend our expertise in networking and we were also slowly increasing our channel strength.

1997 saw the emerging of Caps as a complete networking solutions provide, along with major tie-ups with leaders in Industry such as **Dax networks, EICON networks and Nordx CDT.**

In **2003**, we introduced Radio connectivity and Wireless technology, making networking even more simplified then ever before.

In **2004**, caps started branching out and took our solutions across south india, with direct presence in major metros.

In **2005** we came up with Brand “Netfox”, our own brand catering to Passive Network. Our brand was born from our commitment to excellence and our promise to deliver the best possible.

In **2007**, caps joined hands with Kaspersky to maket their security solutions across South India.

2011 is one of a flagship year for caps. This year caps made its way for pan india operation by signing up with kaspersy as National Distributor for Corporate Licences.

Today, caps has emerged as one of the leading Value added Distributor for IT Products with a very large network of channel partners. With this efficient network of partners caps is available wherever and whenever customers need them.

Product Profile

 <p>Complete range of Network Copper, Fiber and Rack Solutions</p>	 <p>Complete Range of Anti Threat Management Solution</p>	 <p>Dynamic security for the global enterprise network</p>
 <p>Routers, Firewalls, Switches, VOIP</p>	 <p>Layer 3 Switching Solutions</p>	 <p>VoIP, Wireless and Ethernet networking</p>
